

METHOD OF PRODUCING NON-BOVINE CHYMOSIN AND USE HEREOF

ABSTRACT

- 5 A method of recombinantly producing a non-bovine pre-prochymosin, prochymosin or chymosin derived from ruminant species including deer species, buffalo species, antelope species, giraffe species, ovine species and caprine species; *Camelidae* species such as *Camelus dromedarius*; porcine species; or *Equidae* species. The recombinant enzymes are used in milk coagulating compositions in cheese manufacturing based on cow's milk
- 10 and milk from any animal species which are used in cheese manufacturing including camel's milk.
